Tech-Dry®

TIMBER WATER REPELLENT

What it is?

Timber Water Repellent is a water-based penetrating silicone water repellent sealer.

What does it do?

Timber Water Repellent is applied to treat & protect natural unsealed timber substrates against water penetration, mould staining, and deterioration. It will help reduce the visible signs of surface aging and discoloration due to water penetrating & weathering.

Its low VOC, user-friendly silicone formula allows the product to easily soak into the timber surface. This unique sealer physically bonds to the timber fibres within the surface making it water resistant without affecting the surface appearance, texture, and breathability.

Key Features & Benefits

- Durable low VOC silicone formula
- UV & alkaline stable
- Environmentally friendly, water-based product
- User-friendly, easy to apply
- Dries to a clear matte breathable finish
- Easy clean-up in water

innovative | solutions

Tech-Dry®

Where can it be used?

- Fencing
- Decking
- Structural house framing
- Outdoor furniture

Application

The use of Timber Water Repellent is simple and user friendly. It can be applied using a brush, roller or spray. However, it is recommended to use a hand pressure spray or airless spray equipment to avoid direct contact of application equipment with the surface.

About Us

Tech-Dry is an Australian-owned manufacturer specialising in innovative silicone nanotechnology building protection since 1982. Our product range includes water repellent admixtures for concrete, paint & waterproofing, water & stain-proof sealers, earth building protection, anti-graffiti products, and products for fixing rising damp.
